

Case study - Development and support

Support - ERP Company, Malaysia

Problem statement

Integration with ERP application for efficient Warehouse and Inventory transfer system based on barcodes

Solution

- We developed and implemented a mobile application in Salesforce to scan the barcode and accordingly view information, add to inventory or transfer materials from one warehouse to another.
- This enabled the client to closely track and optimize inventory storage levels.
- After implementing this system, out of stock and overstocking incidents reduced by 80%.

Technologies used

Salesforce Platform, APEX
